

# STREAM ECOLOGY

2009 Fall

**Instructor:** Jian-Ping Suen, [jpsuen@mail.ncku.edu.tw](mailto:jpsuen@mail.ncku.edu.tw), (O) 2757575 ext. 63243

**Meeting Time:** 09:10~12:00, Monday, Room 4646, HOE

**Office hour:** Room 4661, HOE. 14:00~15:30, Monday, or by appointments

This courses will focus on the description of physical, chemical, and biological characteristics in streams and rivers including an integrated study of the environmental factors affecting the composition and distribution of biota; emphasizes the application of ecological principles in aquatic ecosystem protection and management.

## **Required Readings**

Readings for each lecture will be assigned from course notes or the textbook: **Allan J. D. and M. M. Castillo, 2007. *Stream Ecology: Structure and function of running waters*. 2<sup>nd</sup> Eds.**

Recommended textbook: **Hauer, F. R. and G. A. Lamberti. 2007. *Methods in Stream Ecology*. 2<sup>nd</sup> Eds.**

**FISRWG, 1998. *Stream Corridor Restoration*.** [http://www.nrcs.usda.gov/technical/stream\\_restoration/](http://www.nrcs.usda.gov/technical/stream_restoration/)

Additional readings will be accessible through libraries.

## **Examinations**

There will be two examinations (and ?? quizzes 20-30 minute exercises).

## **Assignments**

Critical Review:

This assignment is an original writing and critical analysis project. Please find a journal paper in the 'ecology or environmental science' category. It is better an engineering paper with some ecological applications. I would recommend that you select the article that seems the most interesting, is related to your research, or perhaps, ties in with another course. The details of this assignment will be announced soon.

Discussion

I strongly encourage (ask) students to discuss in the classroom. A discussion forum will also be used to extend the discussion outside of the classroom.

## **Grading**

Course grades will be determined based on the following:

Examinations and Quizzes	60%
Assignments	35%
Professional Evaluation	5%

## 2009 LECTURE TENTATIVE SCHEDULE

### Describing Stream Systems

- |    |  |                 |
|----|--|-----------------|
| 1. | Introductory Class                               | Syllabus, Notes |
| 2. | Watersheds                                       | Notes           |
| 3. | Channel morphology                               | Notes, Chap 3   |
| 4. | Channels and Flow                                | Notes, Chap 3   |
| 5. | Physical factors that affect organisms - habitat | Notes, Chap 5   |
| 6. | Stream water chemistry                           | Notes, Chap 4   |
| 7. | Nutrient dynamics                                | Notes, Chap 11  |
| 8. | Time issues in streams                           | Notes           |
| 9. | Understanding organism distribution              | Notes           |

### Ecological Fundamentals

- |     |                                       |                    |
|-----|---------------------------------------|--------------------|
| 10. | Basic Ecological Theory of Streams    | Notes, Chap 1 & 14 |
| 11. | Energy – Primary Production           | Notes, Chap 6      |
| 12. | Energy – Organic Matter Dynamics      | Notes, Chap 7      |
| 13. | Trophic Relationships                 | Notes, Chap 8      |
| 14. | Periphyton                            | Notes              |
| 15. | Macroinvertebrates                    | Notes              |
| 16. | Fish                                  | Notes              |
| 17. | Predator Prey Interactions in Streams | Notes, Chap 9      |
| 18. | Grazing, Competition                  | Notes, Chap 9      |
| 19. | Succession, Colonization and Movement | Notes, Chap 9      |
